RE: Bifenthrin / Talstar Pesticide

Hello George,

I have dropped these associated documents off for your review so that we can better understand the reality of the sprays that were sprayed at the Quest Building, 6101 Yellowstone Road, Ste.'s 259B, 259C, and 259D, Cheyenne, WY. These sheets are available from Presto-X for anyone to have and should have been sought after by your office as part of this investigation.

You should know that a number of the employees had these sheets before your interviews and found your interjections on the chemical being safe as less than accurate. If you read the companies FMC sheets, WHICH CLEARLY STATES THIS IS AN INSECTICIDE NOT HERBASIDE and the first information is stating HAZARDS IDENTIFICATION "the classification of this product is #1 for specific target organ toxicity for a (single exposure) and #1 for specific target organ toxicity for (repeated exposure). Of course we are at the "repeated" exposure.

Next, the data sheet states the "Danger Overview" which goes on to say "Danger - Harmful if swallowed, Harmful if inhaled, Suspected of causing cancer, Causes damage to organs, and last but not least, Causes damage to organs through PROLONGED OR REPEATED EXPOSURE!

Let's move on to FIRST AID MEASURES, skin contact says "Take off contaminated clothing, Rinse skin IMMEDIATELY WITH PLENTY OF WATER FOR 15-20 minutes! Most of us sat in this spray for hours and then went home in our cars, to our homes where we sat and walked, and then MAYBE some of us showered. Some of us went to bed and layered it in our beds. Also, noted "Most important symptoms and effects, BOTH ACUTE AND DELAYED ARE THE CENTRAL NERVOUS SYSTEM.

Now for #6, Accidental Release Measures, "Isolate and post spill (spray) area. WEAR SUITABLE PROTECTIVE CLOTHING, GLOVES AND EYE/FACE PROTECTION. For "Environmental Precautions keep PEOPLE AND ANIMALS AWAY FROM AND UPWIND OF SPILL/LEAK. KEEP MATERIAL OUT OF LAKES, STREAMS, PONDS AND SEWER DRAINS.

I am sure you can follow through these information sheets but I want to draw your attention to the TOXICOLOGICAL INFORMATION TO THE STOT – SINGLE EXPOSURE AND MOST IMPORTANTLY TO THE STOT REPEATED EXPOSURE – "CAUSES DAMAGE TO ORGANS THROUGH PROLONGED OR REPEATED EXPOSURE" TARGETED ORGANS "CENTRAL NERVOUS SYSTEM"

There is much more as I have also dropped off the information with the skull and cross bones discussing the "Pyrethroid Poisoning" of Bifenthrin that labels this chemical as "Moderate Acute Toxicity". So my question to you, is how you in good consciousness could tell the staff that is still sitting in this spray that

the spray is not harmful and is "SAFE". Please indicate where this is stated in these documents that were produced and printed by the company that made this product and labeled it as "Harmful". I am asking you to post this FMC sheet along with whatever sheets you left for these employees to make their own assertions or for you to retract/edit your statement by letter to these employees. This is an obvious oversight of you and needs to be corrected immediately if your investigation is comprehensive and factual. I am sure the general public can read and make their own decisions with the safety of this product. I also am to understand that you believe that the spray is gone, and from the research that I have done, this product is known to attach to soil and can stay within the soil from 7 days to 8 months. The fact that this was sprayed on carpet and fabric that was not cleaned, and traffic was high daily, there is plenty of soil in the carpet and walls (never dusted) to be tested. I don't believe the spray went away, and since your office took over a month to even truly investigate this, I feel this was more than questionable time frame and response regarding your job to protect the employees or the public.

It should also be stated that we cannot go back into that building until you can prove there is no chemicals or possibility for a re-exposure this also included any and all continued sprays or pest control reports since August 3, 2015.

We are so exhausted from the mis-information, the lies to our doctors and the cover-ups starting with our supervisors, our managers and the associated offices (OSHA), as well as your office's delayed responses that we are now going to decide our course of action with regards to warning people of the safety issues of our work place and the safety of the general public. The State of Wyoming Offices that are supposed to operate as precautionary and supportive entities for the protection of your employees, the general public and the health of all concerned.

There are many means to get the word out and documents are fact. These statements are not made without proof in the way of documentation and witnesses. While we have been left to prove substantiated injuries to our health, accumulated medical bills and no income, and no insurance for some, we have done so on our own time and expenses. We have a voice, there are many of us, and we have an outlet to warn anyone that may come in contact with this situation. We deserve the truth and the due diligence of all parties involved to investigate truthfully and accurately in determining ALL THE FACTS AND FINDINGS. This means that these facts are not determined by opinion or personal reference/interests, as you have stated prior to witnesses during a phone call that you would be okay to bathe in this chemical like "Off" bug spray, this is and was not "Off/Deet", while we are not experts, we are educated and believe the public can read also. Just as we have been put on a time-line, we have done the same with this whole escapade regarding this investigation-you are already behind the time frame given by your office and posted on your own web page.

We want a response in writing from your office within 24 hours regarding your decision to post the FMC Sheets in the building at 6101 Yellowstone at 259B, 259C, and 259D.

Sincerely,

**Ex. 6 PP / Ex. 7(C)**
